<p>To fully exploit the constrained width, avoid loading the neighbouring structures and straddle shared utilities running under the site, the #127803; house was constructed using a lightweight steel frame on a piled slab. The steel work was prefabricated as a series of #127803; portal frames that were craned down the alley and site-welded together. Given that every inch in such a narrow space #127803; was valuable we chose to fully weld the connections and express the frame internally, even utilising the depth of the #127803; steels to maximise the space.</p>

<p>Alongside the painted steel a simple palette of spruce plywood, douglas fir joists, terrazzo and cork #127803; flooring enriches the interior. Externally the timber framed walls are clad in handmade pewter glazed brick slips with a patina #127803; that reflects the changing light of the sky. Both the simply landscaped and planted rear courtyard and the garden in #127803; front of the house enhance the feeling of space in this small dwelling.</p>

<p>This self-build project had a long gestation, fitted #127803; in around professional and family life. The design and construction were developed as time and money allowed so whilst planning #127803; consent was given in January 2014 and the ground works commenced in the spring of 2024, the building was not #127803; completed until August 2024. We worked closely with friend and joiner Michael Tye to lead a small team of local #127803; subcontractors and employed specialist fabricators for certain key packages as well as undertaking a fair amount of the work ourselves.</p>

<p>The #127803; result is a unique and highly crafted home that is a testament to the commitment, effort and support of many #127803; people. By replacing a narrow disused alley with this comfortable small home we hope to have enhanced the streetscape we #127803; inhabit. As the building completes the terrace, so does the front garden - with the simple bin store, planting, level #127803; access and bike parking we aimed to keep it open and reinforce the pavement line without making a hard boundary. #127803; The development highlights the viability, both economically and spatially of small brownfield sites to provide high quality sustainable development at #127803; a time of housing shortage. We see it as a model for other seemingly undevelopable urban gap sites where the #127803; value added is through the quality of the architecture rather than over-development.</p>
