<div class="hwc kCrYT" style="padding-bottom:12px;padding-top:0px"><div><div><div><div></div>

To check for the existence of a limit of a function at a point, you can use the following conditions:</div>

</h2></div><div></div><div></div><div>

The function must be defined in a punctured neighborhood of the point.</div></div></div>

</div></div></div></div></div></div></div>

The limit of the function as it approaches the point must exist and be finite.</div></div></div>

</div></div></div></div>

What are the conditions to check for existence of limit of a function at a ...

<div class="hwc kCrYT" style="padding-bottom:12px;padding-top:0px"><div><div><div><div></div>

How do you know a limit does not exist? In short, the limit does not exist

if there is a lack of continuity in the neighbourhood about the value of interest

. Recall that there doesn't need to be continuity at the value of interest, just the neighbourhood is required.</div>
